

Visualization Plan.

Our homepage. User select a date and a time, and the pollution heat-map of this region will be updated to the time user specifies. Then user can click on map, and a small window will pop up. In which she can select which pollutant to view, and readings in nearby hours will appear.

Our side pages side pages are used to show different aspects of our data. For example, we will use bar charts to rank the pollution level by place; Pie charts are used to show major pollutants and most polluted places. Line charts are use to show the trend of pollution level. User can add pollutants or select the place.

These charts can be combined, to show more insightful information, for example, we can also display small bar charts when user click on our homepage.
